

# SpEdDoc System Requirements

SpEdDoc 10

By Richard A. Smith

August 2011

Make sure your FileMaker installations are up to date. SpEdDoc will run on the latest version of FM 10 or 11, so install the latest version of FM that you own and then install the updaters to bring installations up to the following (check for these and more recent updaters at FileMaker.com - <http://filemaker.com/support/downloads/index.html>):

- FM 10: FMP 10.0v3, FMS 10.0v2
- FM 11: FMP 11.0v3 (11.0v4 for Mac OS Lion), FMS 11.0v3

Check the FileMaker site for any more recent updaters released since this document was posted. For instance, FMP 11 has been updated to address the release of Mac OS Lion.

Rodney Santwier at FileMaker can verify the latest version of FileMaker software owned by your organization and help you obtain software.

Review the system requirements to ensure that your hardware will properly run FileMaker. While FileMaker's minimum server specifications may be sufficient for a few users on a local network at a single site, **most SD/SU's will benefit from a much more robust server.**
